GO7 Marketing & Sales Playbook

1. The Business Model

Revenue per order (food example)

Item	Customer pays	Go7 earns
Food subtotal	₦3,000	₦300 (10% vendor commission)
Delivery fee	₦1,000	₦500 (50% after rider)
Platform fee	₦300 (10%)	₦300
Total	**₦4,300**	**₦1,100**

Go7 costs per order

Cost	Amount
Rider payout (50% of delivery)	₦500
Marketer commission	₦110 (10% of Go7 revenue)
Payment processing	₦120
Refunds/voids reserve	₦50
Total costs	**₦780**
Go7 gross profit	**₦320**

Break-even

At 3,500 active customers ordering twice/month:

- 7,000 orders/month
- Gross profit: ₦320 × 7,000 = ₦2,240,000

You need roughly **5,000 customers** to cover a lean team.

```

Daily tracker

Name	Phone	Area	Signup date	First order	Type

---

7. Payouts

Weekly pay calculation

```
Marketer pay =
  Base (based on target hit)
  + Customer first-order bonuses
  + Customer 10% commission
  + Vendor first-order bonuses
  + Vendor 5% commission
```

Minimum withdrawal

₦5,000. Paid weekly to bank account.

---

8. Rider Payout

50/50 split

Delivery fee	Rider gets	Go7 keeps
₦700	₦350	₦350
₦1,000	₦500	₦500
₦1,200	₦600	₦600

Because Go7 owns the bikes, this is a transitional model. Future plan is fixed per-delivery pay.

---

9. Unit Economics Summary

AOV	Go7 profit/order	Orders for ₦1.5m profit
